Dynamics Review Problems

Problem 15. The pendulum consists of two slender rods **AB** and **OC** which have a mass of 3 kg/m. The thin plate has a mass of 12 kg/m². Determine the location \bar{y} of the center of mass **G** of the pendulum, then calculate the moment of inertia of the pendulum about the axis perpendicular to the page and passing through **G**.

$$\begin{aligned}
 \text{MASS}_{AB} &= 0.8(3) = 2.4 \text{ kg} \\
 \text{MASS}_{OC} &= 1.5(3) = 4.5 \text{ kg} \\
 \text{MASS}_{\text{DISK}} &= 12(\pi)(.3)^2 = 3.39 \text{ kg} \\
 \text{MASS}_{\text{HOLE}} &= 12(\pi)(.1)^2 = 0.377 \text{ kg}
 \end{aligned}$$
