

Problem 14: The frame is used to support the 50-kg cylinder. Determine the horizontal and vertical components of reaction at *A* and *D*.

$$\rightarrow \sum M_A = 0 = .7(490.5) - 1.6C_y + 1.7(490.5)$$

$$50\text{kg} \times 9.81 = 490.5\text{N}$$

$$C_y = 735 \text{ N} \uparrow \text{ on } ABC$$

$$\uparrow \sum F_y = 0 = A_y - 490.5 - 490.5 + 735 \quad A_y = 245 \text{ N} \uparrow$$

$$\rightarrow \sum F_x = 0 = -A_x + C_x \quad A_x = C_x$$

$$\text{FBD} \quad \begin{array}{c} 490.5 \text{ N} \\ \downarrow \\ \text{Dy} \end{array} \quad \begin{array}{c} 735 \text{ N} \\ \leftarrow \\ \text{Cx} \end{array} \quad \begin{array}{l} \uparrow \sum F_y = 0 = -735 + 490.5 + \text{Dy} \\ \text{Dy} = 244.5 \text{ N} \uparrow \end{array}$$

$$\begin{array}{l} \sum m_C = 0 = -1.2D_x + 1.6(244.5) + 490.5(.9) \\ D_x = 694 \text{ N} \rightarrow \\ \rightarrow \sum F_x = 0 = 694 - C_x \\ C_x = 694 \text{ N} \leftarrow \text{on } CD \\ A_x = C_x = 694 \text{ N} \leftarrow \text{on } AB \end{array}$$

ANSWER:

$$A_x = 695 \text{ N} \leftarrow$$

$$A_y = 245 \text{ N} \uparrow$$

$$D_x = 695 \text{ N} \rightarrow$$

$$D_y = 245 \text{ N} \uparrow$$
