

Problem 3: Impulse Momentum II

Spool B is at rest and spool A is rotating at 6 rad/s when the slack in the cord connecting them is taken up. Determine the angular velocity of each spool immediately after the cord is jerked tight by the spinning of spool A. A and B have weights and radii of gyration $W_A = 30 \text{ lb}$, $k_A = 0.8 \text{ ft}$ and $W_B = 15 \text{ lb}$, $k_B = 0.6 \text{ ft}$, respectively.

CLASSIFY MOTION
BOTH RAFA

PROPERTIES

$$W_A = 30 \text{ lb}$$

$$M_A = \frac{30}{32.2} = 0.932 \text{ SLUG} \quad I_{GA} = MK^2 = .932(0.8)^2 = 0.596 \text{ SLUG-FT}^2$$

$$W_B = 15 \text{ lb}$$

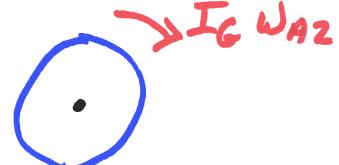

$$M_B = \frac{15}{32.2} = 0.466 \text{ SLUG} \quad I_{GB} = 0.466(0.6)^2 = 0.1677 \text{ SLUG-FT}^2$$

$$\text{MOMENTUM 1} + \text{IMPULSE} = \text{MOMENTUM 2}$$

A

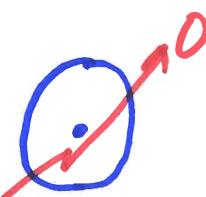

$$+ \int \begin{cases} \text{spool A} \\ 1.2' \end{cases} dt =$$

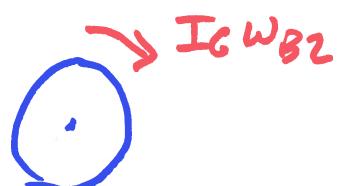

$$\sum \Sigma M_G \quad 0.596(6) - 1.2 \int F dt = 0.596 w_{A2} \quad (1)$$

B

$$+ \int \begin{cases} \text{spool B} \\ 1.04' \end{cases} dt =$$

$$\sum \Sigma M_G \quad 0 + 0.4 \int F dt = 0.1677 w_{B2} \quad (2)$$

Problem 3: Impulse Momentum II

$$RAFA \quad V = \omega r$$

$$V_{C O R D_2 \text{ on } A} = \omega_{A2} r_A = \omega_{A2} (1.2)$$

$$V_{C O R D_2 \text{ on } B} = \omega_{B2} r_B = \omega_{B2} (0.4) \quad \text{But } V_{C O R D_2 A} = V_{C O R D_2 B}$$

$$\text{So...} \quad 1.2 \omega_{A2} = 0.4 \omega_{B2} \quad (3)$$

$$(1) \quad 1.2 \int F dt + 0.596 \omega_{A2} + 0 \omega_{B2} = 3.576$$

$$(2) \quad 0.4 \int F dt + 0 \omega_{A2} - 0.1677 \omega_{B2} = 0$$

$$(3) \quad 0 \int F dt + 1.2 \omega_{A2} - 0.4 \omega_{B2} = 0$$

$$\begin{bmatrix} 1.2 & 0.596 & 0 \\ 0.4 & 0 & -0.1677 \\ 0 & 1.2 & -0.4 \end{bmatrix} \begin{Bmatrix} \int F dt \\ \omega_{A2} \\ \omega_{B2} \end{Bmatrix} = \begin{Bmatrix} 3.576 \\ 0 \\ 0 \end{Bmatrix}$$

SOLVE

$$\int F dt = 2.14$$

$$\underline{\omega_{A2} = 1.70 \text{ rad/s}}$$

$$\underline{\omega_{B2} = 5.10 \text{ rad/s}}$$
